

## Selecting long-life paints and metallic materials

## Abstract

- With one test, we can reproduce the effect of airborne sea salt and rainfall on corrosion.
- The test enables long-life paint and metals to be selected accurately and quickly.
- Maintenance costs can be reduced by prolonging maintenance intervals for repainting and renewal.

Accelerated corrosion test instrument and test procedure

## Features

- Reproduces corrosion in coastal areas accurately and quickly
- Reproduces effects of airborne sea salt and rainfall with one test

## Application Scenarios

- Selecting long-life paints and metals for better infrastructure maintenance
- Evaluating corrosion resistance of products used outdoors
