

Comparative analysis technology of PC-operation logs

Easily find points of improvement in work
procedures and compliance by managers

#Productivity Improvement

///Technical Issue

To identify points for improvement through the comparison of PC-operation logs, it is necessary to find appearance of similar works.

///Research Goal

Comparison of PC-operation logs enables find similar procedures and violations, improving procedure efficiency and reducing work of violation-checking.

---Technology

- Identifies similarities by automatically finding and comparing operations that are related and occur at the same time.
- Automatically create work procedure manuals using PC-operation logs and label data from the operation screen.

---Applicable Business

Applicable to the following situations in PC operations in the financial, municipal, and telecommunications industries, etc.(Established technology)

- Improving the efficiency of rookies in PC work by using procedures devised by experts.
- Used to check employees for non-compliance in their daily work.

---Novelty

While commercial tools automatically extract common workflows from multiple PC-operation logs, this technology enables the extraction of efficient work procedures and rule-breaking behavior through the comparison of logs.
