

///Technical Issue

Understanding the behavior of the person and the meeting situation can be challenging when using technology that converts dialogue into text, like meeting transcripts.

///Research Goal

It enables an intuitive understanding of behaviors and situations in conversations by interpreting visual text and graphics.

---Technology

Technology that extracts not just the content but also the meeting situations from multimodal information in a conversation, organizing text and graphics in a structured way to intuitively convey the situation.

---Novelty

The world's first AI graphic recording technology that creates structured graphics and text reflecting individual subjective values.

---Applicable Business

In the field of Information and communications, it will be applied to speed-dating and co-creation platforms such as workshops(around the end of 2025).
